

AKASH SURVE

Full-Stack Software Engineer

Bangalore, India | +91 86684 58742 | surveakash01@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

Full-Stack Software Engineer with 3+ years building scalable, high-performance, configurable web applications across React.js/Redux frontends and Node.js backends. Strong in reusable UI component libraries, responsive interfaces, and cross-browser performance optimization, with growing depth in AI-augmented engineering — building Model Context Protocol (MCP) tooling, integrating LLM-powered features, and shipping AWS serverless and CRM integrations on a global financial-intelligence platform.

SKILLS

Frontend: React.js, Redux, JavaScript (ES6+), TypeScript, HTML5, CSS3, Next.js, Tailwind CSS

AI / LLM: Claude, OpenAI & Gemini APIs, Model Context Protocol (MCP), Tool-Calling Agents, RAG, Prompt Engineering & Caching, LLM Feature Integration, AI-Assisted Development (Claude Code)

Cloud (AWS): AWS Lambda, Serverless Framework, CloudFront, S3, Lambda Authorizers, Puppeteer

Integrations: CRM: Salesforce, HubSpot & Zoho; Gmail Add-on; REST APIs, OAuth

Quality & Tooling: Performance Optimization, Code Splitting, Lazy Loading, Memoization, Debugging, Code Reviews, Git, GitHub, Postman, Agile / Scrum

WORK EXPERIENCE

Frontend Software Engineer — Tracxn

Jan 2023 – Present | Bangalore, India | Global market-intelligence platform for investors, corporates, and financial institutions.

- Building an **AI-powered documentation and research assistant** (docs service) — a multi-provider LLM agent (Claude/Opus, GPT, Gemini) with agentic tool-calling that searches docs via RAG, runs web search, and executes Tracxn search/feature APIs to answer user queries, with streaming responses, intent detection, prompt caching/versioning, and DOCX/Excel/PDF export.
- Built an internal **Model Context Protocol (MCP) server** (*tracxn-api-migration*) exposing 8 read-only tools — schema-field validation, fuzzy field matching, and endpoint comparison — enabling AI assistants to query migration notes and cutting manual API-migration effort across the engineering team.
- Delivered **CRM integrations** — Salesforce, HubSpot, and Zoho connectors — syncing company/entity data and enabling deal, lead, and account workflows, with CRM board-view and pipeline UI.
- Built a **Gmail add-on** surfacing Tracxn data and exported documents directly into users' email workflow.
- Drove **AI-augmented development** using Claude Code, custom agents, and codebase-context tooling, accelerating feature delivery and reducing onboarding ramp time.
- Engineered **AWS serverless** functions (Serverless Framework) including a CloudFront-invalidation handler and a protected-asset Lambda authorizer.
- Optimized server-side PDF generation by **4x** using AWS Lambda and Puppeteer with parallel rendering and performance tuning.
- Engineered and maintained large-scale, user-facing React.js and Redux applications, significantly improving responsiveness and load performance.
- Designed a User Preferences module (personalized dashboards, configurable UX) and implemented advanced filtering, sorting, and search using dynamic configurations and Redux state management.
- Built and optimized a Compare Tool to evaluate multiple companies/entities side-by-side, improving analytical decision-making.
- Developed a Feature Access and Role-Based Access Control (RBAC) system, strengthening security, compliance, and feature-visibility management.
- Created reusable UI component libraries and optimized runtime performance via lazy loading, code splitting, and memoization, reducing bundle size.
- Conducted code and M2 reviews, mentored new engineers, and collaborated cross-functionally for seamless end-to-end delivery.

PROJECTS

- **AI Developer Tooling & Side Projects** — Custom AI agents, Claude Code skills, and MCP integrations automating code search, migration, and review; full-stack LLM app using React with the Claude/OpenAI APIs, RAG, and agentic workflows.

EDUCATION

BE in Mechanical Engineering | 2019–2022 — Foundations in problem-solving, analytical thinking, and system design.

Full-Stack Web Development Bootcamp | 2022 — 30-week program (JavaScript, React.js, Redux, Node.js, HTML, CSS); built scalable apps and reusable UI components; Agile, Git/GitHub, code reviews.
