

AKASH SURVE

Full-Stack Software Engineer

Bangalore, India | +91 86684 58742 | surveakash01@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

SUMMARY

Full-Stack Software Engineer with 3.5+ years building scalable, high-performance, configurable web applications across React.js/Redux frontends and Node.js backends. Strong in reusable UI component libraries, responsive interfaces, and cross-browser performance optimization, with growing depth in AI-augmented engineering: building Model Context Protocol (MCP) tooling, integrating LLM-powered features, and shipping AWS serverless and CRM integrations on a global financial-intelligence platform. Also ships a native macOS app on the Mac App Store, solo.

SKILLS

Frontend: React.js, Redux, JavaScript (ES6+), TypeScript, HTML5, CSS3, Next.js, Tailwind CSS

AI / LLM: Claude, OpenAI & Gemini APIs, Model Context Protocol (MCP), Tool-Calling Agents, RAG, Prompt Engineering & Caching, LLM Feature Integration, AI-Assisted Development (Claude Code)

Backend: Node.js, Express, MongoDB, SQLite, REST APIs, WebSockets

macOS: Swift, SwiftUI, AppKit, SQLite/FTS5, StoreKit 2, Apple Vision, App Store submission

Cloud: AWS Lambda, Serverless Framework, CloudFront, S3, Lambda Authorizers, Puppeteer, Cloudflare Workers

Integrations: CRM: Salesforce, HubSpot & Zoho; Gmail Add-on; REST APIs, OAuth

Tooling: Performance Optimization, Code Splitting, Lazy Loading, Memoization, Code Reviews, Git, Postman, Agile / Scrum

WORK EXPERIENCE

Full-Stack Software Engineer, Tracxn

Jan 2023 – Present | Bangalore, India | Global market-intelligence platform for investors, corporates, and financial institutions.

- Building an **AI-powered documentation and research assistant** (docs service): a multi-provider LLM agent (Claude/Opus, GPT, Gemini) with agentic tool-calling that searches docs via RAG, runs web search, and executes Tracxn search/feature APIs to answer user queries, with streaming responses, intent detection, prompt caching/versioning, and DOCX/Excel/PDF export.
- Built an internal **Model Context Protocol (MCP) server** (*tracxn-api-migration*) exposing 8 read-only tools (schema-field validation, fuzzy field matching, and endpoint comparison), enabling AI assistants to query migration notes and cutting manual API-migration effort across the engineering team.
- Delivered **CRM integrations** for Salesforce, HubSpot, and Zoho, syncing company/entity data and enabling deal, lead, and account workflows, with CRM board-view and pipeline UI.
- Built a **Gmail add-on** surfacing Tracxn data and exported documents directly into users' email workflow.
- Drove **AI-augmented development** using Claude Code, custom agents, and codebase-context tooling, accelerating feature delivery and reducing onboarding ramp time.
- Engineered **AWS serverless** functions (Serverless Framework) including a CloudFront-invalidation handler and a protected-asset Lambda authorizer.
- Optimized server-side PDF generation by **4x** using AWS Lambda and Puppeteer with parallel rendering and performance tuning.
- Designed a User Preferences module (personalized dashboards, configurable UX) and a Compare Tool for evaluating entities side-by-side, with advanced filtering, sorting, and search driven by dynamic configurations and Redux state.
- Developed a Feature Access and Role-Based Access Control (RBAC) system, strengthening security, compliance, and feature-visibility management.
- Engineered and maintained large-scale, user-facing React.js and Redux applications, and built the reusable UI component libraries behind them, where lazy loading, code splitting, and memoization cut bundle size and improving load performance.
- Conducted design and code reviews, mentored new engineers, and collaborated cross-functionally for seamless end-to-end delivery.

PROJECTS

- ClipBuddy**, a native macOS clipboard manager in Swift/SwiftUI over a local SQLite store with FTS5 search; StoreKit subscriptions, 16 localizations, no account or server. Shipped solo: app, site, listing, release pipeline. clipbuddyapp.com | [Mac App Store](#)
- AI Developer Tooling**, including custom AI agents, Claude Code skills, and MCP integrations automating code search, migration, and review; full-stack LLM app using React with the Claude/OpenAI APIs, RAG, and agentic workflows.

EDUCATION

BE in Mechanical Engineering | Savitribai Phule Pune University, 2019–2022

Full-Stack Web Development | Masai School, 2022. 30-week program: JavaScript, React.js, Redux, Node.js, Agile, code reviews.
